Patent No. 6835546
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lowery, David B.
APPLICANT: Smith, Valdin G.
APPLICANT: Kubiak, Teresa M.
APPLICANT: Larsen, Marcha J.
TITLE OF INVENTION: Drosophila G Protein Coupled Receptors, Nucleic Acids, And MethorITLE OF INVENTION: Related To The Same
FILE REFERENCE: 629.1cp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        131 GCATCGATGATATTACTGTAGACTTTTACATCCGATCAATCTTCACATTCCTCTACGGGT 190

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

neuropeptide Y receptor - fruit fly (Drosophila melanogaster)
NiAlternate names: G protein-coupled receptor PR4
C;Species: Drosophila melanogaster
C;Date: 16-Sep-1992 #sequence_revision 16-Sep-1992 #text_change 09-Jul-2004
C;Accession: A41738
R;Li, X.J.; Wu, Y.N.; North, R.A.; Forte, M.
J. Biol. Chem. 267, 9-12, 1992
A;Ittle: Cloning, functional expression, and developmental regulation of a neuropeptide A;Reference number: A41738; MUID:92112730; PMID:1370455
A;Accession: A41738
A;Molecule type: mRNA
A;Residues: 1-449 <LIA>

The sequence represents a G protein-coupled receptor-like (GPCR-like) receptor protein. GPCR-like receptors and their associated nucleic acids may be used to identify candidate compounds for their ability to modulate the activity of GPCRs. The sequences therefore are useful for treating and preventing infection by endoparasitic and ectoparasitic invertebrate parasities, especially helminths and insects, and particularly ailments related to aberrant neurological and neuromuscular function

```
receptor protein. GPCR-like receptors and their associated nucleic acids may be used to identify candidate compounds for their ability to modulate the activity of GPCRs. The sequences therefore are useful for treating and preventing infection by endoparasitic and ectoparasitic invertebrate parasities, especially helmininhs and insects, and particularly ailments related to aberrant neurological and neuromuscular function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PLTLINLVKDFKKEPEMLKRQPFFWAINAHVIAMSLVVWNPLLFFWLTRKOKRSGLSKIL 360

The sequence represents a G protein-coupled receptor-like (GPCR-like) receptor protein. GPCR-like receptors and their associated nucleic acids may be used to identify candidate compounds for their ability to modulate the activity of GPCRs. The sequences therefore are useful for treating and preventing infection by endoparasitic and ectoparasitic invertebrate parasites, especially helminths and insects, and particularly ailments related to aberrant neurological and neuromuscular function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                126 RYRSIVTPLREPWSDRHARWLLMFTWVVAFLASYPL------YYSQNLKTMVIENV 175

GPCR-like receptors and their associated nucleic acids may be used to identify candidate compounds for their ability to modulate the activity of GPCRs. The sequences therefore are useful for treating and preventing infection by endoparasitic and ectoparasitic invertebrate parasites, especially helminths and insects, and particularly ailments related to aberrant neurological and neuromuscular function

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel polypeptides (P1) from Drosophila melanogaster having the biological activity of a peptide receptor. Molecules of the invention are used to find new plant protection compounds or insecticides, or to find genes encoding a polypeptide involved in the structure of functionally similar receptors in insects This sequence represents a Drosophila melanogaster (fruitfly) peptide receptor described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IRSIFTFLYGFLFVLGIFGNGGVLWAVARNKRLQSARNVFLLNLIFTDLILVFTAIPVTF
